

## EQUITONE fibre cement facade materials

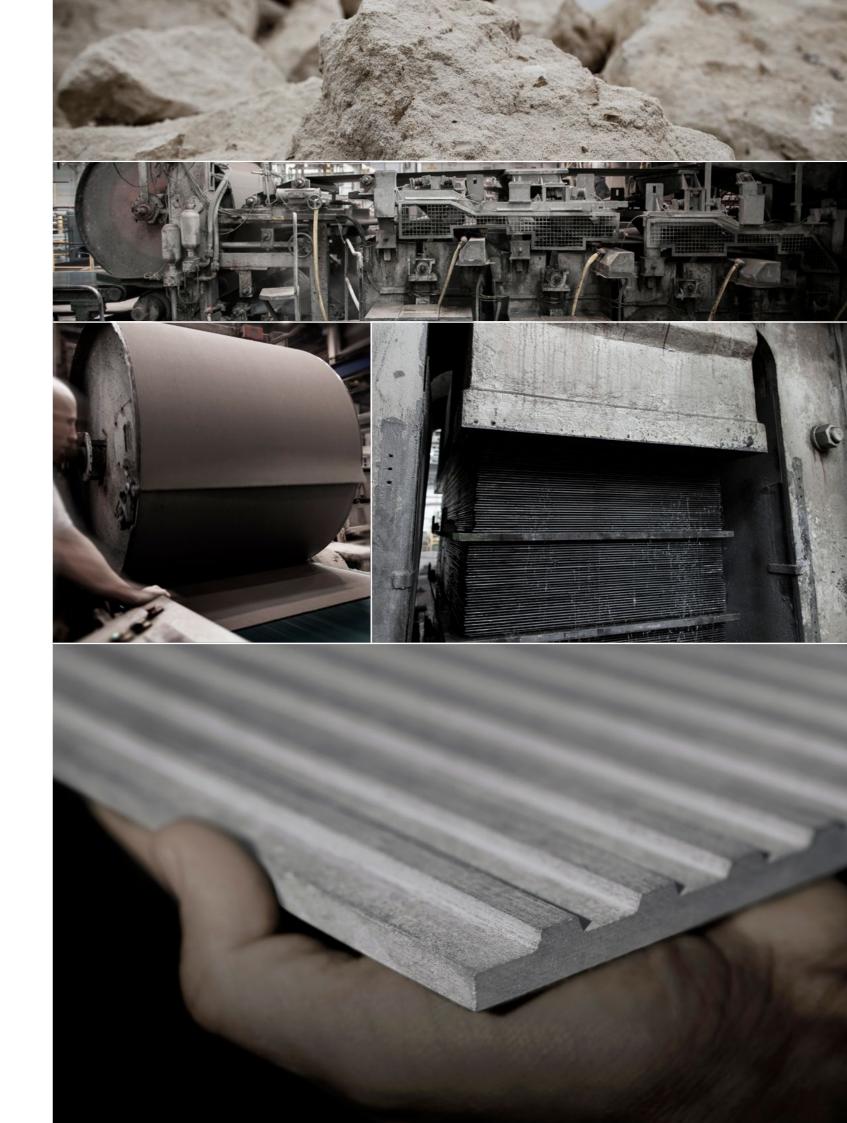

When Ludwig Hatschek invented fibre cement in the late 19th century, he combined the basic elements of the earth: mineral materials, water, air and fire (heat) in a simple filtration process. Our mother company, Etex, has been manufacturing fibre cement materials since 1905. The most prestigious incarnation in this proud heritage of unique materials is the EQUITONE® facade material range. The Hatschek production process makes each EQUITONE facade panel unique with an individual fibre cement texture. Most EQUITONE facade materials are through-coloured with a raw, unfinished character.

In the 1950s leading architects such as Walter Gropius pioneered the use of coated fibre cement panels using the ventilated facade (rainscreen) system. Designer Willy Guhl created the famous "loop chair" from 1 piece of fibre cement in 1954.

This design still bears witness to the core qualities of the fibre cement base material: thin, light, durable and beautiful. In 1987, Herzog & De Meuron designed the Ricola storage building in Laufen using uncoated fibre cement panels.

The resulting shutter facade, which is a reference to the cardboard boxes inside, inspired our company to start the industrial development of raw untreated fibre cement materials.

Today, EQUITONE has a full range of through-coloured, untreated fibre cement materials. Leading architects of our time are exploring and transforming the EQUITONE material in remarkable facade designs.

#### Design potential

EQUITONE facade materials offer unparalleled design flexibility. The fibre cement material is through-coloured, which means the surface displays the inner texture and colour of the core fibre cement material. No matter what facade design options you explore, the through-coloured materials can be transformed into crisp, monolithic facade details.

EQUITONE facade materials come in a maximum panel size of  $1.25 \times 3 \text{ m } (4 \times 10 \times 10^{-1})$  and can be transformed into any size or shape using standard tools in the workshop or on site. The material can be perforated using waterjet or CNC machines, large or very small cuts can be made, it can even be embossed and printed. Some designers have used it for interiors or furniture. The through-coloured material allows you to achieve flawless intricate details.

#### **EQUITONE** [linea]

EQUITONE [linea] is a unique 3D shaped, through-coloured facade material that plays with light and shadow. It displays a linear texture that highlights the raw inner texture of the core fibre cement material.

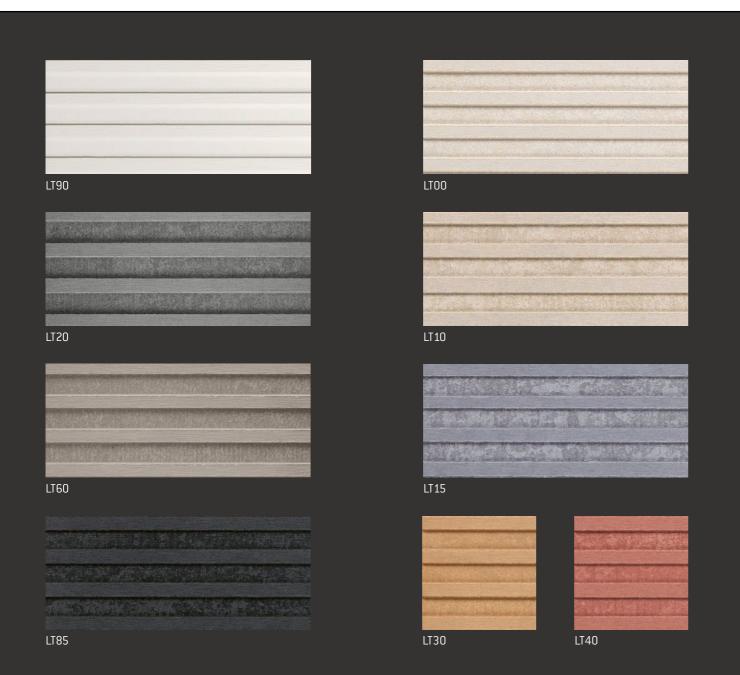

**Touch**: Structured, relief, depth.

 $\textbf{Visual:} \ \textbf{Different, playful, lot of possibilities, changes depending on the point of view.}$ 

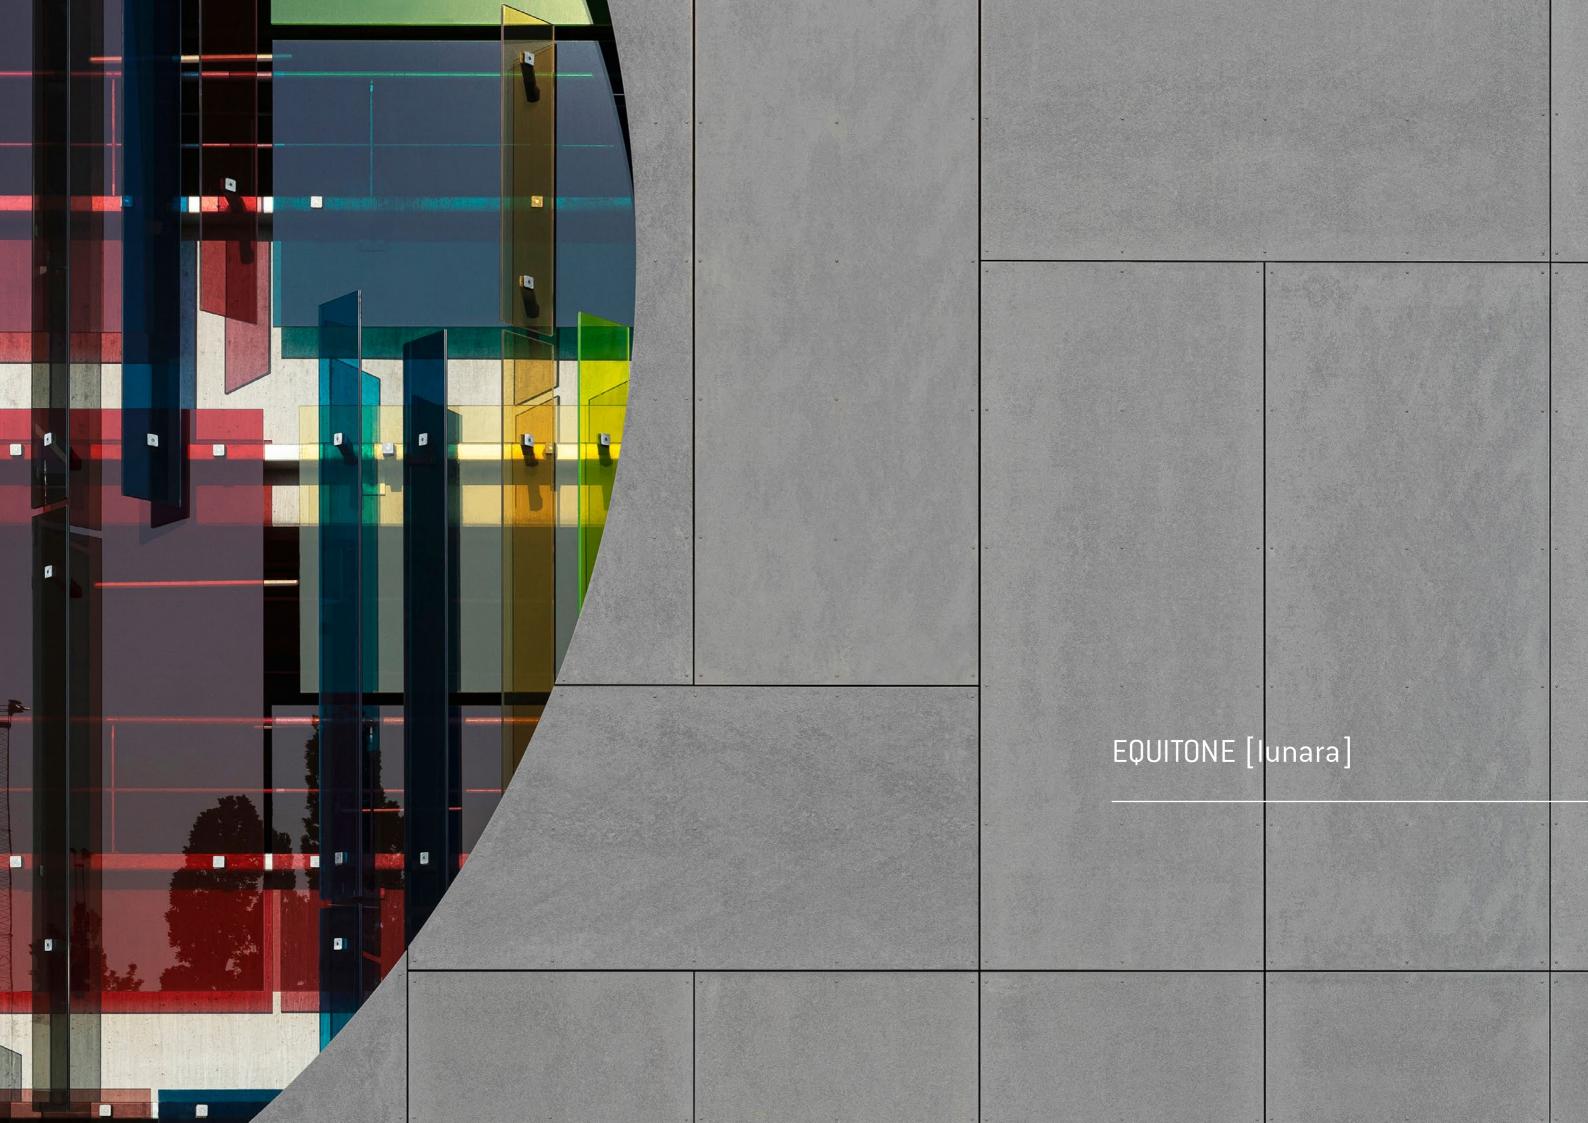

Available in 9 colours.

# **EQUITONE** [lunara]

EQUITONE [lunara] is a through-coloured fibre cement panel with a surface resembling a lunar landscape. Each panel is unique in terms of its colour, texture and surface, with a pattern that is not repeated.

**Touch**: Rough, unpolished fibre cement surface with delicate linen touch.

Visual: Expressive, natural, unique.

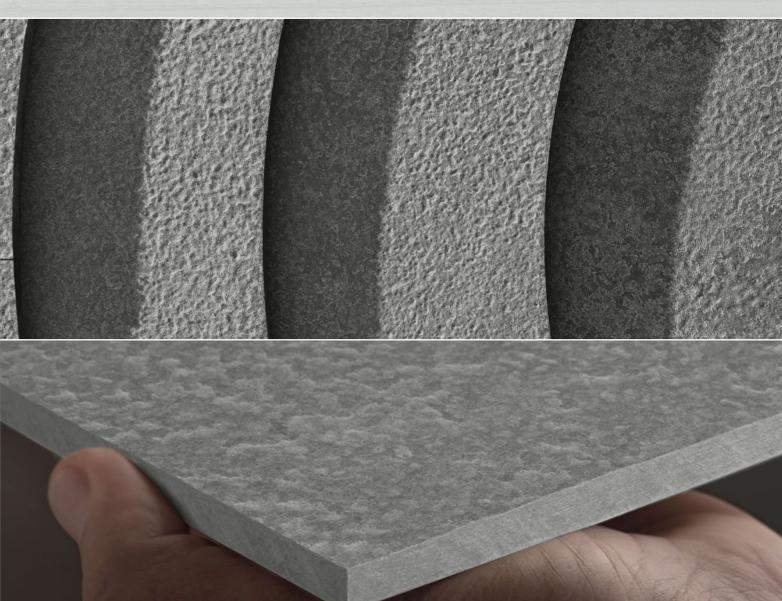

Available in 2 colours.

Thickness Width Lenghts

10 mm 1220 mm 2500 - 3050 mm

# **EQUITONE** [tectiva]

EQUITONE [tectiva] is a through-coloured facade material, characterised by a sanded surface. Every panel is unique, strongly expressing the raw texture of the core fibre cement material.

**Touch**: Fine sanding lines.

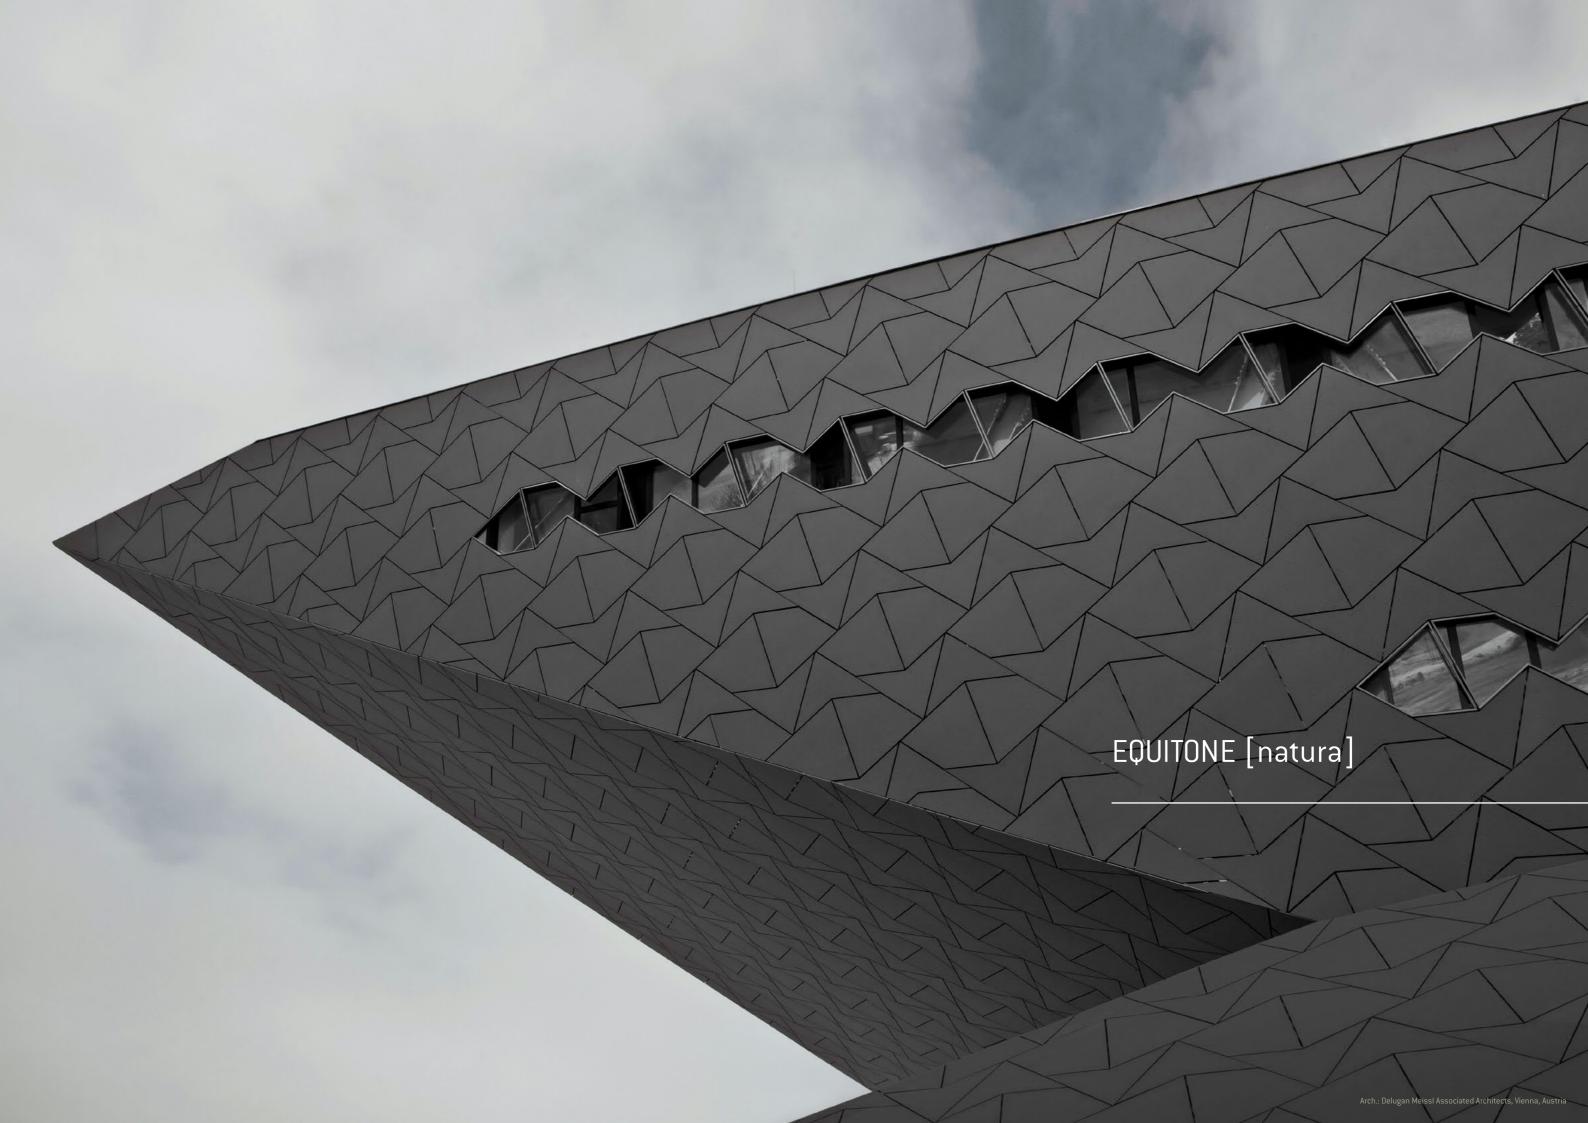

**Visual**: Dry, lively, dynamic, with naturally occurring hues within the material. Available in 9 colours.

ThicknessWidthLenghts8 mm1220 mm2500 - 3050 mm

### **EQUITONE** [natura]

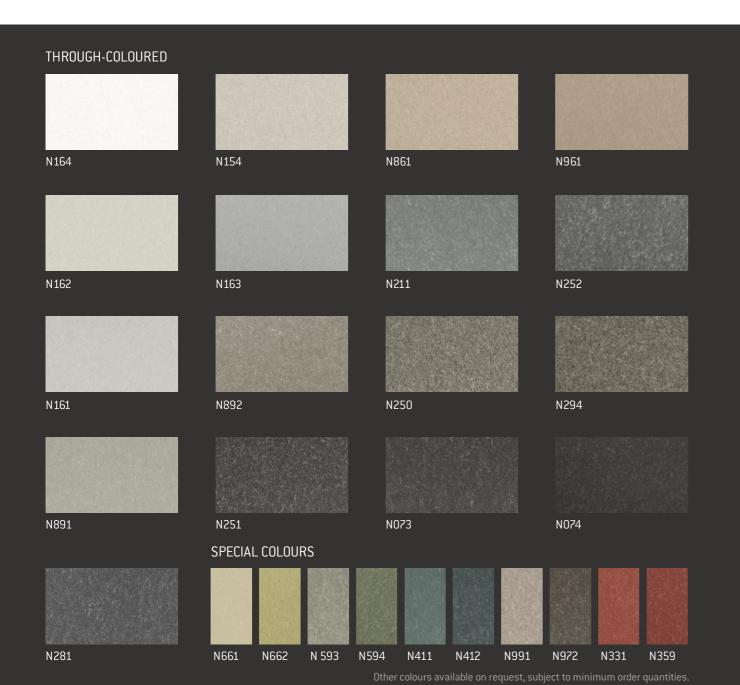

EQUITONE [natura] is a through-coloured facade material. It has a sleek and refined surface with visible fibres randomly distributed throughout.

**Touch**: Matt, silk, smooth surface finish.

**Visual**: Fibres distributed randomly like the milky way, refined, precious. Available in 27 colours.
